Further information

No Data Available.

SECTION 6: Accidental release measures

- 6.1. Personal precautions, protective equipment and emergency procedures: Avoid dust formation and avoid breathing vapours, mist, smoke, or gas. For personal protection see section 8.
- 6.2. Environmental precautions: Do not let product enter drains.
- 6.3. Methods and materials for containment and cleaning up: Keep in suitable, closed containers for disposal.

SECTION 7: Handling and storage

- 7.1. Precautions for safe handling: Provide appropriate exhaust ventilation at places where dust is formed. Normal measures for preventative fire protection. For precautions see section 2.2.
- 7.2. Conditions for safe storage, including any incompatibilities: Keep container tightly closed and away from light.
 - Recommended storage temperature: 15 - 25 °C
 - Recommended long-term storage temperature: 4 - 8 °C
 - Specific end use(s): Apart from the uses mentioned in section 1.2. no other specific uses are stipulated.

SECTION 8: Exposure controls /Personal protection

- 8.1. Control parameters: No data available.
- 8.2. Appropriate engineering controls: Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

The basic types of engineering controls are:

- Process controls which involve changing the way a job activity or process is done to reduce the risk
- Enclosure and /or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment.

8.3. Individual protection measures, such as personal protective equipment (PPE):

Eye /Face protection

Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

Skin protection

Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove's outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

Full /Splash Contact:

- Materials: Nitrile rubber
- Minimum layer thickness: 0.11 mm
- Break through time: 480 min

Body protection

Impervious clothing. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

Respiratory protection

Respiratory protection not required. For nuisance exposures use type OV / AG (US) or type ABEK (EN 14387) respirator cartridges as a backup to engineering controls. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or GEN (EU).

Environmental exposure controls

Do not let product enter drains.
